

CHENYI WENG

 she050623@gmail.com |  linkedin.com/in/wengchen |  mona100421.github.io/chenyi/ | Los Angeles, CA

EDUCATION

University of Southern California (USC)

Los Angeles, CA

M.S. in Spatial Data Science (STEM)

Jan 2024 – Dec 2025

Relevant Coursework: Data Science at Scale, Machine Learning, Distributed Data Processing

National Taipei University of Business

Taipei, Taiwan

B.B.A. in International Business

Sep 2018 – Jun 2022

Minor: Information Management

Relevant Coursework: Data Structures, Operating Systems, Object-Oriented Analysis, Computer Security

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Java, C, SQL

Frameworks: React, Node.js, Express, Flask, FastAPI

Cloud & Distributed Systems: AWS, Docker, Spark, RESTful Services

Databases: MongoDB, PostgreSQL, MySQL (schema design & data modeling)

Systems & Tools: Git, GitHub Actions, CI/CD, Bash, Pytest

Concepts: Distributed Systems, Scalable Backend Services, API Design, Data Pipelines, Authentication & Authorization, Privacy & Security Fundamentals

EXPERIENCE & PROJECTS

Software Development Engineer Intern in IDXExchange - Remote

Boise, ID

Tech: React, JavaScript/TypeScript, Node.js, Express, MySQL, REST APIs, Git/GitHub

Jan 2026 – Present

- Developing a full-stack real estate property search web application similar to Zillow or Redfin.
- Designing and implementing backend REST APIs for property listings, filters, pagination, and property detail pages.
- Working with relational databases (MySQL), writing efficient queries and understanding indexing and schema design.
- Building responsive frontend components and integrating frontend UI with backend APIs.
- Collaborating using Git and GitHub within a structured local development workflow.

Software Engineer in Ryzlink (Full-Stack E-Commerce Platform) - Remote

San Jose, CA

Tech: React, TypeScript, Node.js, Express, MongoDB, JWT

Dec 2025 – Present

- Designed and built a consumer-facing, interactive e-commerce platform supporting real-world user and admin workflows, with emphasis on usability, performance, and reliability.
- Implemented end-to-end user journeys including authentication, browsing, cart management, checkout, and order tracking.
- Developed scalable backend APIs with a layered architecture (controllers, services, models) to support growing feature complexity and concurrent users.
- Built JWT-based authentication and role-based access control, ensuring secure feature access and permission-aware UI behavior.
- Designed data models for User, Product, Cart, and Order entities, maintaining consistent state transitions and data integrity across the system.
- Collaborated across frontend and backend to iterate on features based on user flows and edge cases, simulating production product development.

ADDITIONAL INFORMATION

- Familiar with cloud-based, data-driven product environments and large-scale system constraints.
- Strong interest in ads platforms, measurement, and privacy-aware system design.
- Languages: English (Professional), Mandarin Chinese (Native)
